

Low-cost access system ideal for FSG contractors

Easi-Dec Access Systems Ltd has just announced the launch of Trim-Line, a new low-cost telescopic modular access system, designed for fitting windows, fascias, soffits and guttering on standard two storey houses. The new Trim-Line system can be assembled in 20 minutes, and costs as little as £100 per month. It provides rapid and simple access up to gutter level with a guarded 6.5 metres of platform which means installers can work comfortably with standard 5 metre lengths of trim.

Working from ladders is actively discouraged by the HSE and scaffolding is both slow to erect and too costly to justify for short duration jobs. Scaffold towers are too problematic in garden situations and uneven or sloping ground. Trim-Line has been designed to overcome all these issues. It is easy to transport, quick to erect and can cope with many of the access problems faced when fitting FSG including spanning conservatories, porches and bay windows.

The standard Trim-Line consists of two end platforms, each 1.2 metres long. Each of these can be erected in only 5 minutes and used as independent platforms. Connecting them with the standard 4.6 metre Cat-Walk creates a safe working platform extending to 6.5 metres. The optional 6.6 Cat-Walk increases the working length to 8.5 metres. An End Support Frame is also available allowing Trim-Line to be erected in tight boundaries where ground access is restricted to as little as 15 cms.

The complete system is independently adjustable in 4 directions. The Cat-Walk varies the working length while the telescopic legs can incrementally adjust the working height. The legs can be adjusted independently to accommodate uneven ground, and the reach between the platform and wall is also adjustable for deep soffits.

Trim-Line will easily fit onto a roof rack and when erected provides plenty of working area for two Installers to work quickly and easily up to gutter level. The monthly payments to buy a Trim-Line system are less than half the cost of hiring scaffolding for a single installation and removes the resistance to scaffolding by customers who fear damage and security problems particularly when it is left up for lengthy periods.

Trim-Line is available on interest-free 'hire to buy' terms or finance for as little as £100 per month. Easi-Dec hold fortnightly demonstrations with complimentary lunch at their premises in Bedfordshire, or free on-site demonstrations can be arranged by calling 01767 691812. Further information is available from the [Trim-Line](#) website

More about Easi-Dec

Based in Sandy, Bedfordshire, Easi-Dec Access Systems Ltd have been designing, manufacturing and supplying innovative access solutions and work platforms to the construction industry since 1984. The company has established a very high reputation for novel and practical solutions to a wide range of issues relating to safe working at height. Easi-Dec products are extensively used by Local Authorities, Housing Associations, as well as leading companies in the construction, glass and glazing industries.

Manufactured to the highest standards and specifications at the company's premises in Sandy, all Easi-Dec products are developed by an in-house design team in close cooperation with end-users and those involved in safety at height principles.

Comprehensive certificated training is provided free of charge with Trim-Line and all Easi-Dec platforms or systems.
